

INSPECTION IS THE WEDGE. THE SYSTEM IS THE POINT.

You can't run your business on **inspection software.**

Fire protection companies lose margin in the seams between disconnected tools — the re-keyed job, the deficiency that never became a quote, the invoice that waited. InspectSync is the operating system that removes the seams: inspection to invoice, one connected system.

THE PROBLEM

A stack that grew one tool at a time.

Inspection software, QuickBooks, spreadsheets, a shared drive, a group text. Each solved one problem the day you bought it; none of them talk to each other. So the same job gets entered five times, and deficiencies found in the field **die in a PDF** instead of becoming quoted work. The enemy isn't your tools — it's the distance between them.

WHY IT WORKS — THE HANDOFFS

One entry in the field. Six handoffs. Zero re-typing. Any vendor can ship a quoting feature. None can ship the handoff — it only exists when one company builds the whole system.

WHO IT'S FOR

Purpose-built for fire protection companies running **5–50 technicians** — not generic field-service software with the labels changed.

PROOF, NOT PROMISES

Alert Fire Solutions (Houston) moved its **15 users onto InspectSync after a single demo** — no pilot committee, no six-month evaluation.

BUILT FROM INSIDE THE INDUSTRY

A decade building fire protection software inside **Convergint, Summit, and Pye Barker** — by people who've keyed the same job twice and hated it.

Seven modules, one system.

Use one or all seven — same price per user.

- 1 Jobs WEDGE**
Inspections & service, field to sign-off; findings become quotable deficiencies.
- 2 CRM**
Pipeline before the sale, full account record after — no re-keying.
- 3 Projects**
Quoting/estimating and project delivery, estimate reconciled to actuals.
- 4 Contracts**
Recurring agreements that self-generate jobs & invoices; renewal alerts.
- 5 Billing**
Completed work to collected cash, with a queue and AR aging that drills.
- 6 Operations**
Inventory, fleet, time & support — the back office in one module.
- 7 Analytics**
Company-wide reporting; every number drills to the records behind it.

Included with every account: Home, Communications & Admin — the connective tissue that makes seven modules feel like one.

See one of your own workflows run end to end.

Watch the handoffs disappear on your own jobs. **100% cloud, no annual contract, live in about two business days.**
